

LAW PreDiscovery™

Imaging and Electronic Discovery Software

When used with document culling and filtering, processing costs and review can be reduced by up to 80%.

LAW PreDiscovery™ software combines production-level imaging and electronic discovery processing in one powerful, easy-to-use application. **It provides firms with greater control and clarity during discovery by offering an internal solution to quickly assess and manage the amount of discovery in a case.**

Cut huge documents sets down to size prior to costly processing and reviewing

Utilizing proprietary pre-culling and de-duplicating technology, this powerful software enables you to control costs by reducing the amount of files that need to be processed. Your team can begin its review much sooner with fewer files.

On average, LAW PreDiscovery **actually pays for itself** within the first two months of use by eliminating unnecessary processing costs and reducing review time.

Plus, LAW PreDiscovery supports more than 100 scanners, over 2,000 file types for identification and extraction and more than 200 for printing. Law firms benefit from a full-range of time- and effort-saving collection and processing capabilities.

From a single, simple-to-use platform users can:

- Load electronic documents and mail stores, scan paper documents, import tiff images and load files.
- Extract text and metadata for seamless review in Concordance® litigation management software or other database applications.
- Process e-documents, mailstores, file lists and Microsoft® Outlook® folders simultaneously.
- Perform de-duplication and culling to process and review only responsive data.
- Use enhanced filtering capabilities for faster, more effective searching and culling.

Accomplish even more with the latest version of LAW PreDiscovery

- **Text Indexing Enhancements** - Gain better control of how words and punctuation are indexed—plus a significant increase in speed. You'll experience many improvements in the text indexing features, including: **Auto-Indexing** - Text indexing is more efficient—since you can run it as a background process during an ED import.
- **Enhanced Embedded File Support** - Extraction of attachments/embedded files is now supported for the following types of documents: Microsoft® Office 2007 (Open XML) and PDF files (including PDF portfolios and packages)

- **Custom Separator Pages** - Separator page options are available for E-Print, Print and TIFF conversion. This feature allows you to configure separator pages, headers, footers, fields, fonts and more!
- **License Management** - Track all licenses centrally with the LAW Management Console. Add and release licenses directly instead of needing to close LAW PreDiscovery and open the Profile Manager.
- **Reveal Hidden Text for Microsoft® Word Documents** - See text in the output TIFF or hard copy that is not visible when the text and background colors are the same or when the text blends in with highlights in the source document.

Full EDRM/XML compliance means even more ease and efficiency

With the adoption of the new EDRM/XML standard, LAW PreDiscovery transfers electronically stored information to and from supported sources and applications with greater ease, speed and reliability.

So now you can transfer data faster—with less effort and lower costs. You'll also be reducing the risk of expensive errors during data movement. Plus, you'll be ensuring seamless transfers across systems and products.

- Transfer data faster—with less effort and at lower costs.
- Reduce the risk of costly errors during data movement.
- Ensure seamless transfers across systems and products.

Attorneys request LAW PreDiscovery because they can:

- Go from CD/DVD to review in minutes.
- Review files natively or convert to TIFF.
- Cull duplicate and non-responsive files.
- Export directly to Concordance software and other leading document review platforms.

Litigation teams request LAW PreDiscovery because they can use it to:

- Process both paper documents and electronic files quickly.
- Extract text, metadata, e-mails and attachments.
- Filter by file type, search full text, index and code.
- Convert files to TIFF or print to paper.
- Perform batch processes such as Bates numbering, endorsing, OCR, printing and TIFF conversion.
- Export native files, images, coded data and OCR text to the desired litigation support application.
- Administer and monitor all workstations from single computer console.

Achieve greater ROI on your technology investment with lower cost of ownership

Find out how LAW PreDiscovery software's unique subscription-based pricing can also save you considerable cost over "click-based" services. Ask a LexisNexis® Discovery Services Specialist to run the numbers for you using your current costs and volume.
